Project Description

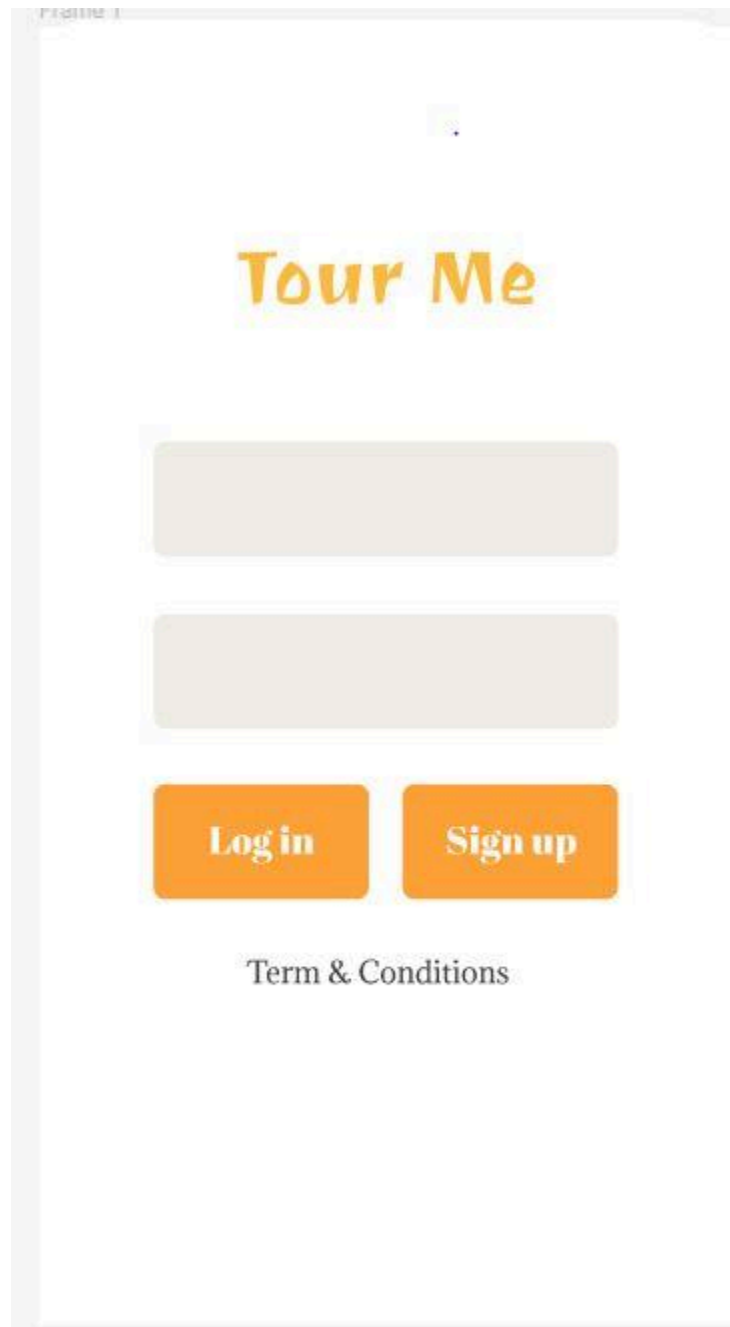

The app I have chosen for my final project aims to make traveling easier for tourists in any city around the world. However, due to the class scope limitations, I have focused on designing it specifically for the city of San Francisco.

In this app, tourists can log in and choose from a list of places they want to visit. For each selected package, they can see the description, cost, reviews, and feedback before adding it to their tour list. Once they have added all the packages they want, they can proceed to check out. They will then receive a confirmation of their tour in the app, as well as through text if they have provided their number.

Wireframing

The screenshots below show the wireframes of the project, which were designed using Figma technology. This was done to make the project clearer and easier to understand before it is developed and presented as the final project.

- User Login page

The image shows a mobile app login screen for 'Tour Me'. At the top, there is a small profile icon and the text 'Welcome back!'. Below this is the app name 'Tour Me' in a large, bold, orange font. There are two light gray input fields for email and password. Below the password field is a 'Forgot password?' link. At the bottom, there are two orange buttons: 'Log in' and 'Sign up'. Below the buttons is a 'Term & Conditions' link.

Tour Packages

Coit Tower
San Francisco \$ 250
Duration of Tour: 2 hours

Coit Tower

Coit Tower, a slender white concrete column rising from the top of Telegraph Hill, has been an emblem of San Francisco's skyline since its completion in 1933, a welcoming beacon to visitors and residents alike. Its observation deck, reached by elevator (tickets can be purchased in the gift shop), provides 360-degree views of the city and bay, including the Golden Gate and Bay bridges.
